

■ ■ ■ Applicatie Contactallergie

UPDATE !

Dear subscriber,

The contact allergy application you are used to has been upgraded with the possibility to generate **lists of pharmaceuticals to avoid** (before called 'CODEX').

You can now select 'Pharmaceutical products' as the product type while making a patient letter.

Confirming the selection 'Not relevant' allows you to generate lists of both authorized cosmetic products and avoidable pharmaceutical specialties.

When indicating Preparations, the most common preparations are also included (e.g. Therapeutic Magistral Formulary).

These data will be further updated, and the lists with pharmaceutical specialties are not exhaustive.

It is therefore recommended to check the list of ingredients and/or leaflet for the presence of allergens and, in case of doubt, to consult your pharmacist, physician or manufacturer.

The filter for **Additional allergens** allows you to complete the patient letter by adding allergens such as metals, rubbers, and plants who generally don't occur in pharmaceutical products and cosmetics.

When formatting the letter you will also find a **Comments** box in order to add your own appropriate comments as free text.

The screenshot shows a web interface for selecting allergens. It is divided into three main sections: 'Allergen group', 'Allergen', and 'Additional allergens'. Each section has a search filter, a scrollable list of items, and a selection box with a clear button. The 'Additional allergens' section and the 'Comments' text area are circled in red.

Allergen group	Allergen	Additional allergens
<small>Allergens grouped taking into account cross-allergy between chemically related compounds</small>	<small>Allergens to be selected separately</small>	<small>Allergens not included in cosmetic or pharmaceutical products in our advice lists (e.g. metals, rubber allergens)</small>
filter group	filter allergens	filter additional

[Delete everything] [Create list]		

The related **documents** (leaflets on the allergens involved), are added at the end of the letter as separate links.

Your constructive remarks will help us to improve and elaborate usability and data correction.

Please do not hesitate to contact our unit in case you need further information or guiding through the new application.
